

FJDTrion TerraMind

THE DIGITAL BRIDGE TO YOUR JOBSITE

THE DIGITAL BRIDGE TO YOUR JOBSITE

FJDTrion TerraMind connects office planning with field execution, giving teams real-time visibility into project data, equipment activity, and results — all in one place.

PRODUCT FEATURES

Dashboard

Give project managers and site supervisors a centralized view of every project, machine, and jobsite. Track locations, equipment status, quantities, and progress on a map-based dashboard, so teams can understand field operations faster and make decisions with confidence.

Device Management

Help equipment managers keep every connected machine visible and manageable from one platform. View machine status, current project, location, and operating condition in real time, making it easier to coordinate resources and respond quickly to site needs.

Project Management

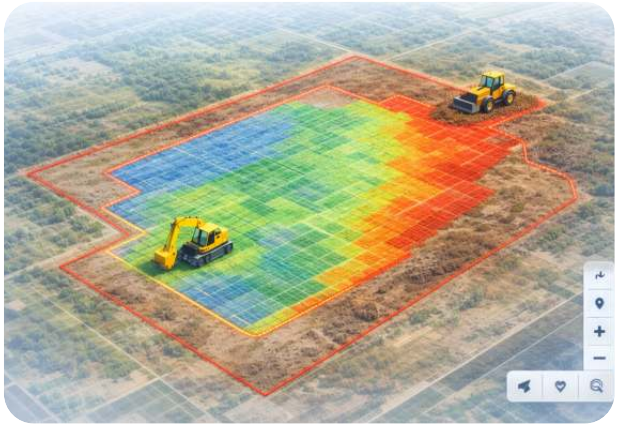

Provide project teams with one shared workspace to manage project data, design files, coordinate systems, members, and construction records. Keep office teams, field crews, and machines working from consistent project information throughout the job.

Remote Project Deployment

Allow office engineers to prepare projects in advance and send the right data directly to machines on site. With coordinate systems, design files, and avoidance data deployed remotely, teams can reduce manual setup, minimize errors, and avoid unnecessary site visits.

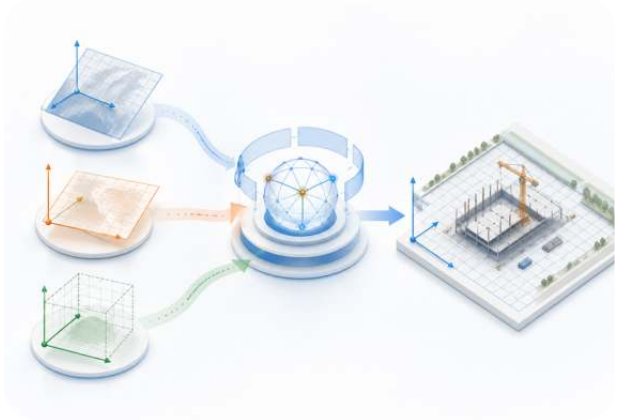

As-Built Visualization

Enable site supervisors and project managers to review construction results directly from machine-generated field data. Visualize as-built progress on the map, track work by area and time, and identify quality risks before they become costly rework.

Project Sharing

Keep contractors, supervisors, equipment teams, and owners aligned with shared access to the same project data. Role-based sharing helps every stakeholder view the information they need, while maintaining clear control over project collaboration.

Coordinate System Management

Support survey teams and office engineers in applying the correct coordinate system to each project. Choose from 6,000+ predefined global coordinate systems or manage project-specific settings to ensure designs, machines, and field results align accurately on site.

Access Anywhere, No Installation

Work with projects and machines directly in a web browser—no software installation or local IT maintenance required.

Manage in One Place

Manage devices, projects, and related data from a single platform, making it easier to coordinate resources and daily operations.

Clear Visibility of Field Operations

View machine locations, work progress, and construction results on maps and dashboards to quickly understand what is happening on site.

Remote Project Setup and Data Collection

Create and update projects from the office and transfer them directly to machines in the field, while collecting work results automatically.

Keep Teams Aligned

Share the same project data across contractors, supervisors, and owners.

Generate As-Built Documents

Create standardized as-built reports for review and handover.
